

RF22 Rimfire Suppressor

Product Specification Sheet

Rev: July 2024

The KGM RF22 returns for 2024, with several key enhancements that elevate its performance to new heights. Originally tailored for precision rimfire rifles, the RF22 retains its hallmark precision and repeatability while delivering enhanced performance and durability for both rimfire and 5.7x28mm pistols. The updated design provides superior sound suppression across all platforms, ensuring a quieter shooting experience without compromising on accuracy.

Our commitment to excellence is evident in our innovative suppressor concentricity approach, which minimizes runout from both the outside diameter and internal aperture. This meticulous engineering guarantees consistent peak performance with every shot, resulting in unparalleled accuracy and minimal POI Shift.

The RF22 stands out as a user-serviceable suppressor, allowing for easy disassembly and maintenance, even after extensive use. If you demand nothing but the best for your rimfire, the RF22 is your suppressor.

Caliber
.22 LR to 5.7x28 mm

Length
5.2" (132 mm)

Width
1.2" (30.5 mm)

Weight
5 oz (142 g)
